PORCELAIN PAVERS

① Pick your Product

At Sharecost you have access to Enmon (China) and Mirage (Italy) porcelain product lines. Multiple colours and sizes are available in each product. Purchases of less than 2 full pallets are subject to shipping charges.

- ✓ **ALL** porcelain products are **Special Order**. Many are available for delivery in as little as 7-12 business days.
- ✓ **Enmon** pavers are sold by the box. Boxes have either 1 or 2 pieces depending on style and size. Please have stock status checked prior to committing to a product.
- ✓ **Mirage** pavers are sold by the box. Boxes have 1 to 3 pieces depending on style and size. Please have stock status checked prior to committing to a product.

② Work with our Sales Team

We'll help determine the best products and solutions for your project. We will also help calculate the exact quantities needed. Please note, a minimum of 10% extra product is suggested to cover cuts and possible breakage.

③ Determine Who Will be Installing the Project

Advise us if you want to DIY or let us know that you would prefer to have an installer for your project.

- ✓ Our knowledgeable staff have practical, hands-on knowledge on paver installation. We can help you with the details to make your first project a success.
- ✓ We have great working relationships with many professional installers on the Island. We can match the right installer to your project and have them contact you to quote and perform the work.

④ Order and Pay for Your Product

We only order product from the manufacturer when your invoice is paid in full. Orders cannot be cancelled or sent back once the product is being shipped to the Island (due to high shipping costs and re-stocking fees). **Special Order product is non-returnable.**

⑤ Prepare for Your Installation

Porcelain pavers typically take 7-12 business days to land in Nanaimo. During this time, it is best to start preparing for your installation.

- ✓ We offer an entire assortment of rental tools, including plate compactors, laser levels, power wheelbarrows, and even excavators to help with the heavy lifting. Now is a good time to make your reservation.
- ✓ Do your excavation, haul-out your dirt, and have us deliver your bulk materials and any other supplies needed for your project **BEFORE** the palletized goods arrive; you will need the space to keep an efficient working jobsite. Also note that water features, irrigation piping, and landscape lighting are usually installed prior to installing your hardscape. Artificial turf is also an easy job to do at the same time as the preparation work is very similar to that of paver installs.

⑥ Pick Up Your Product – or – Have Us Deliver

Pallets of porcelain pavers typically weigh from 1,550 to 2,750 pounds. Most customers choose to have them delivered.

- ✓ We deliver with a heavy-haul flat deck truck and all-terrain forklift to get the pallets as close to the work site as possible. **Please be aware that with porcelain pavers, delivery off smooth pavement is at the customer's own risk.**

⑦ Questions? We are here to help!

Our job is not done once your pallets leave our yard. If you have any questions during your DIY installation, or if you have questions while an installer is working on your site, we are here for you. Please do not hesitate to call.

PORCELAIN PAVERS

Why Buy Porcelain Pavers?

They are the ultimate solution for indoor and outdoor paving. Porcelain slabs truly are the next greatest thing for building outdoor living areas for walkways, patios, feature walls, and even driveways with proper preparation. They are forged at high heat, have similar properties to glass, and provide many high-quality benefits including:

- Versatile installation options
 - sand and gravel
 - within natural grass or artificial turf areas
 - within gravel-areas
 - on pedestals for sloping rooftop or patio applications with water proofing membranes underneath
 - creating seamless interior to exterior flooring
 - installation over concrete slabs with trowel and mortar installation
- Frost resistance
- Anti-slip with grippy texture underfoot
- Resistant to chemicals, salts etc.
- Impervious to water
- Non-fading, even in extreme sunlight and weather
- Will not effloresce
- Strong and durable
- True-to-dimension-sizing for easy installation and design
- Easy to clean
- Can mimic natural stone but with geometric shapes that allow for reduced installation time and cost when compared to natural stone without the need for a stone mason's expertise
- Large-format sizing provides a "less-busy" appearance in landscape compared to concrete pavers
- Very durable alternative to concrete pavers with a completely different finished appearance
- A 10% discount on the purchase of porcelain pavers is available with the purchase of 2 or more full pallets

Why Buy from Sharecost?

- **Experience matters – we have been supplying the hardscaping industry for over 25 years on Vancouver Island and pride ourselves in achieving the very best results desired by our customers. We achieve this with knowledgeable sales-staff in-store to help the do-it-yourselfer get it done.**
- We have the rental equipment and know-how available to you to complete your job properly
- We have access to trusted installers – for those looking for the hands-off approach – we have many industry contacts to help you find the very best contractor for your project.
- We are locally owned and operated so the money spent here stays in your community and allows us to support a variety of charity causes throughout the year.
- We are here to help, always! We care about you, and your results with your next project.
- We have the all the accessories and supplies you need for a professional long-lasting installation!

PORCELAIN PAVERS

Tips and Tricks

- The best method of installation depends on job-site specific conditions including but not limited to soil type and weather conditions.
 - Traditional: compacted road base plus 1” of bedding sand
 - Contemporary: open aggregate allows for the best drainage – 3/4” clear fractured rock plus 1” of 3/8” screed stone – for heavy loads you might consider 1-1/2”-3” rumble rock for the deepest layer of material
 - Mortared over concrete: this method is typically only done by a professional – when done incorrectly breakages may occur
 - Raised Pedestals: typically used on roofs and decks – this can allow for conduit running under the installation and allows for free drainage
- Prior to beginning your project consider what preparation is required to ensure the longevity of your project. The heavier the load expected on the surface, the deeper your base must be.
 - Total depth of excavation = base depth + bedding depth + paver thickness
 - Patios and Walkways (*minimum*) = 4”+1”+0.75” = 5.75” (100+25+20 = 145 mm)
 - Driveways (*minimum*) = 8”+1”+0.75” = 9.75” (200+25+20 = 245 mm)
- Slope away from all buildings – a typical slope is 1/4” per 12” (20 mm per 1000 mm)
- Extend the base 8” (200 mm) beyond the edge of your pavers for a patio installation and 12” (300 mm) for driveways.
- **ALWAYS** compact the soil below your base installation – do not over compact
- Lay a permeable non-woven fabric between the sub-soil and your base turning up the fabric at all edges – this prevents migration of the base layer into the native soil and helps evenly distribute the load on your pavers
- When laying your base, compact in “lifts” to ensure proper leveling – the maximum material that can be compacted at one time depends on the machine used to do the compacting
- For the bedding layer use two 1” (25 mm) pipes to set the depth of the material, drop the material between the pipes, and use a straight screed bar to ensure the level – **AVOID** walking on the bedding layer particularly if using sand or you will need to re-screed
- Lay your pavers over the bedding layer
- **ALWAYS** use spacers when installing porcelain pavers – spacers will maintain an even distance between each tile and help prevent edge chipping
- **ALWAYS** use an edge restraint to ensure the outer row of you project stays in place
